

# Hypergrid in OpenSim

## Edu3d - DAD

# OpenSim e Hypergrid

OpenSim also uses an architecture known as "Hypergrid", which allows users to teleport between multiple OpenSim-based virtual worlds by providing a [hyperlinked](#) map which indexes public grids.<sup>[5]</sup> This allows for public grids to retain teleportation links to each other without having to be on the same grid. The number of hypergrid enabled opensimulator grids fluctuates. A list of active hypergrid enabled opensimulator grids is maintained by [Hypergrid Business-Active Hypergrids](#)<sup>[6]</sup>. As of January 2020, there were just over 300 active hypergrid enabled services.
